

00.1 - Hello User

Write a program that ask the user for their name, and then displays a greeting using their name. Test your program with the following data:

Input	Output
spam	Hello spam!
King Arthur	Hello King Arthur!
Tim the Enchanter	Hello Tim the Enchanter!

Finally, format your program to match the sample below. Your output should exactly match the sample output, character for character, including all white space and punctuation. User input in the sample has been highlighted in **Pappy's Purple** to distinguish it from the program's output, but your user input does not need to be colored. Save your finished program as `hello_user_login.py` where `login` is your Purdue login. Then submit it along with a screenshot showing a run of **all 3** test cases.

Terminal

```
$ python hello_user_login.py
What is your name? King Arthur
Hello King Arthur!
$ python hello_user_login.py
What is your name? spam
Hello spam!
$ python hello_user_login.py
What is your name? Tim the Enchanter
Hello Tim the Enchanter!
```
